

Hooks for pulling out trunks

Hooks designed for pulling out and moving trunks. Used in forest and garden works. The narrow blade with the teeth facilitates driving even in frozen and icy trunks, at the same time preventing them from slipping out.

- blade made of steel with a hardness of 38-40 HRC
- blade thickness: 4 mm
- blade length: 190 mm
- aluminium, profiled handle, painted surface
- riveted connections of elements
- non-slip plastic handle ended with a curved hook prevents the tool from slipping out of the hand, making it easier to carry the trunks
